

Woodlam has been manufacturing moulded plywood and solid wood furniture to the hospitality and contract industry since 1991. We use timber sourced from sustainably managed forestry operations from both South Africa and overseas.

We have recently expanded our product portfolio to include exclusive ranges of imported seating from Italy and Malaysia, and we carry large stocks of this furniture to ensure quick turnaround and competitive pricing.

All of our products are crafted to present the best possible design and quality to suit the environment in which they will be used. Wooden frames can be stained to enhance the wood grain, or painted for that trendy bohemian look. We can upholster any seat to suit the clients specification, including clients own fabric.

We have showrooms in Johannesburg, Cape Town and Durban where we are able to offer advice and service which is tailored to meet our clients needs with regards to product, price and delivery. We have a wider range of products displayed on our website, and we are able to produce bespoke products where required, subject to practical manufacturing volumes.

Welcome to Woodlam, a proudly South African manufacturing business with a BEE rating. We hope to be of further service.

DID YOU KNOW?

- When you buy a wooden chair from Woodlam, you buy green and support the environment.
- Processing timber uses substantially less energy than that required to process plastic or steel.
- Wood is renewable and recyclable. You reduce your carbon footprint and you promote the planting of trees in sustainable forests when buying a wooden chair from Woodlam.

GREEN FACTS:

- Half the weight of a wooden chair is made-up of carbon
- Wood is probably the greenest construction material on the market.
- Trees absorb carbon dioxide (CO²), the carbon becomes trapped in the wood and free oxygen is released into the atmosphere.
- Trees absorb less carbon dioxide (CO²) when mature therefore the process of using mature trees for wood furniture and planting young trees actually increases the amount of carbon dioxide (CO²) removed from the atmosphere.
